BCSE Statement on Release of House Select Committee on the Climate Crisis Majority Report
*Report Shows Opportunities for American Energy Leadership, Coalition will Work to Build Bipartisan Support
for Policy Action*

Washington, DC – Business Council for Sustainable Energy (BCSE) President Lisa Jacobson made the following statement regarding the release of the [House Select Committee on the Climate Crisis Majority Report](#):

“The BCSE is gratified to see strong pillars of action and many smart policy pathways highlighted in the Select Committee’s report. BCSE also applauds the Committee’s extensive outreach across the nation to communities and to the many industry stakeholders. The report clearly identifies clean energy deployment as a priority to slow climate change, drive economic growth, and maintain America’s international competitiveness. Investments in infrastructure and the domestic manufacturing sector will strengthen supply chains and ensure that the clean energy sector can deliver the products and services needed to meet clean energy and climate goals across the country and the world.

“Clean energy is a bipartisan priority, and the BCSE will work to foster increased public collaboration between the Democratic and Republican members of the Select Committee on the Climate Crisis. The [Joint Republican Statement on the Democratic Staff Report](#) shows many areas of alignment for the parties on American industry and innovation.

“While the recommendations in this report begin their path through the legislative process, BCSE urges Congress to pass the American Energy Innovation Act, which has amassed strong bipartisan support under the leadership of Senate Energy and Natural Resources Committee Chairman Lisa Murkowski (R-AK) and Ranking Member Joe Manchin (D-WV), as a foundational first step.”

###

BCSE is a coalition of companies and trade associations from the energy efficiency, natural gas and renewable energy sectors, and also includes investor-owned utilities, public power, independent power producers, project developers, equipment manufacturers, and environmental and energy market service providers. Established in 1992, the Council advocates for policies that expand the use of commercially-available clean energy technologies, products and services. For more information on the Council, please visit: www.bcse.org and download the [Sustainable Energy in America Factbook](#) for the latest industry information.
