

Global Business Supports an Ambitious and Rapid Conclusion to an Environmental Goods Agreement at the World Trade Organization

July 8, 2014

An open letter to WTO negotiators:

Business associations from around the world strongly endorse efforts to negotiate an Environmental Goods Agreement (EGA) under the World Trade Organization (WTO).

We urge governments to make the swift negotiation of an ambitious international agreement to eliminate tariffs on a broad range of environmental goods a priority.

Global trade in environmental goods is already estimated to be around \$1 trillion annually, and growing quickly. According to a report by the United Nations Environment Programme, the International Trade Centre and the International Centre for Trade and Sustainable Development, trade in environmental products more than doubled globally from 2001 to 2007, and exports by developing countries rose as fast as those by developed economies.

An ambitious EGA will further increase global trade in environmental goods, lowering the cost of addressing environmental and climate challenges by removing tariffs that can be as high as 35 percent.

In addition to its intrinsic commercial importance and desirability, a well-designed EGA can act as a stepping stone to lowering tariffs and other trade barriers in other sectors and associated value chains.

We commend trade officials for advancing significant work already, which has provided a strong basis for the EGA negotiations.

Global industry strongly endorses an EGA that is –

1. Commercially significant
2. Negotiated in a timely fashion
3. Implementable
4. Inclusive of as many economies as possible, provided that new entrants are supportive of a commercially significant result, and
5. Flexible to accommodate and adjust to innovation

We are committed to working with governments around the world to ensure a commercially meaningful Environmental Goods Agreement that promotes economic growth, improves environmental outcomes and advances innovation.

Sincerely,
